

How to Update ACVSCore.dbo.ApplicationServer with Transact-SQL in SQL Server Management Studio

Article ID: SWH-KB-nID-000006849

Published: Oct-20-2022

1. First check to see what the current values of the relevant fields in the table are with a SELECT statement.

```
SELECT ObjectID, MachineName,uri,IPAddress FROM  
ACVSCore.dbo.ApplicationServer
```

| ObjectID | MachineName | uri | IPAddress |
|----------|-------------|--|--------------|
| 5000 | OldHostName | net.tcp://oldhostname.mydomain.com:8999/CrossFire/IClientSession | 10.10.10.100 |

2. To ensure that the ACVSCore.dbo.ApplicationServer table is updated accurately, use a T-SQL statement such as:

```
UPDATE ACVSCore.dbo.ApplicationServer  
SET  
MachineName = 'NewHostName',  
uri = 'net.tcp://NewHostName.domain.tld:8999/CrossFire/IClientSession'  
WHERE ObjectID = 5000
```

3. When you execute this T-SQ Statement, you should see (1 row affected) in the Messages pane if it was successful.

4. If the system is part of an Enterprise, either a MAS or a SAS, the ObjectID will be different, and you must also update the IP Address column as such:

```
UPDATE ACVSCore.dbo.ApplicationServer  
SET  
MachineName = 'NewHostName',  
uri = 'net.tcp://NewHostName.domain.tld:8999/CrossFire/IClientSession',  
IPAddress = '10.10.10.10'  
WHERE ObjectID = 2097152002
```
